Nathan Studley

Software Engineer · AI Solutions

Lakeville, MA (remote) · nathanstudley@gmail.com · 508-232-5346 · nathanstudley.github.io · linkedin.com/in/nathan-studley · github.com/NathanStudley

SUMMARY

Software engineer who puts AI agents to work on production systems: multi-agent Claude Code workflows that ship production code under real review gates, LLM features measured against no-AI baselines, and the AWS, integration and Oracle data layers underneath. My day job is the production systems of a third-party logistics company, so what I build with AI has to survive real warehouses and real customers.

EXPERIENCE

Software Engineer · Barrett Distribution Centers — Jan 2025 – Present

Third-party logistics (3PL), warehousing & fulfillment · Remote

- Ship weekly across four production systems (Oracle WMS layer, TypeScript/AWS serverless portal API, partner integrations, ops automation); 3,000+ commits merged since joining.
- Building a configurable order-waving engine, API and dashboard (in final review) with a multi-agent Claude Code workflow: a manager session scopes and verifies, implementer agents work in isolated git worktrees, nothing merges without diff and test review.
- Own schema-as-code for the production WMS: Liquibase CI/CD, automated rollbacks, and nightly drift detection that diffs live PROD against a tracked baseline across nine object types.
- Ship per-customer warehouse logic in PL/SQL (wave routing, carton sortation, SSCC/ZPL labels, inventory views) and brought untracked production objects under source control.
- Built event-driven AWS integrations (Lambda, SQS with deduplication, retries and dead-letter alerting) and hardened label endpoints that carriers and marketplaces call directly.
- Run dependency/CVE hygiene and observability for the org (Dependabot strategy, audit workflows, Datadog alerts on silent failure paths); highest merged-PR and code-review volume on a ~19-engineer team (Aug 2026).

Freelance Software Developer · Monolith Construction Corp. — Jan 2024 – Present

Commercial concrete & masonry contractor, Greater Boston · Lakeville, MA · Hybrid

- Built and run monolithconcorp.com, pair-built with Claude Code, through the company's shift to commercial work: UAT and production on AWS Amplify, a one-command image pipeline, owner-facing design previews.
- Run the company's Google Workspace and automate back-office work, including an AI-assisted weekly payroll workflow (time export → overtime split → approval email).

AI Trainer (Contract) · DataAnnotation — Jun 2024 – Jan 2025

Remote

- Evaluated and debugged frontier-LLM answers to coding prompts and wrote reference prompts and solutions in Python, TypeScript, SQL and C# used to train models.

Teaching Assistant · Embry-Riddle Aeronautical University — Jan 2022 – May 2022

Daytona Beach, FL

SKILLS

How I work: Claude Code: multi-agent orchestration, subagents, skills, hooks · Claude API & Agent SDK · MCP tool integrations · Evals against no-AI baselines · Context engineering (CLAUDE.md, handoffs, design records)

Where it runs: AWS (Lambda, SQS, API Gateway, S3) · Oracle & PL/SQL · Liquibase · GitHub Actions · Datadog

Languages: TypeScript · Python · SQL

EDUCATION & CERTIFICATIONS

B.S. Computer Science, University of Massachusetts Amherst — Jan 2024

GPA 3.73 · Dean's List · Coursework: AI, Algorithms, Data Management, Secure Distributed Systems, Web Programming

AWS Certified Cloud Practitioner — Apr 2024
