Nathan Studley

Software Engineer · AI Solutions

Lakeville, MA (remote) · nathanstudley@gmail.com · nathanstudley.github.io · linkedin.com/in/nathan-studley · github.com/NathanStudley

SUMMARY

Software engineer who puts AI agents to work on production systems: multi-agent Claude Code workflows that ship code under real review gates, agents that investigate real operational data, and LLM features measured against no-AI baselines. My day job is the warehouse database, integrations and robotics behind a third-party logistics company, so what I build with AI has to survive real warehouses and real customers.

EXPERIENCE

Software Engineer · Barrett Distribution Centers — Jan 2025 – Present

Third-party logistics (3PL), warehousing & fulfillment · Remote

- Grew from full-stack work on the customer portal into a primary engineer on the Oracle warehouse-management database: order waving, cartonization, ship checks, label printing and billing feeds for every client.
- Designed and launched robot picking lanes and put-wall automation that connect autonomous mobile robots to the WMS, through vendor testing and client go-lives.
- Built AWS serverless integrations: moved accounts-payable automation off a legacy iPaaS onto Lambda, Salesforce billing with queued retries and failure alerts, a returns-platform workflow, and client order and inventory APIs.
- Lead AI adoption on the team: built tooling that lets AI agents investigate warehouse data safely, plus shared Claude Code skills for dependency remediation and change control; co-presented at the company's internal AI summit.
- Took on database platform work: a production performance audit, Liquibase source control with nightly drift detection, a DB monitoring and automation service, and an org-wide CVE remediation program.
- Building a configurable order-waving engine and dashboard with a multi-agent Claude Code workflow where a manager session scopes and verifies, implementer agents work in isolated worktrees, and nothing merges without diff and test review.

AI & Automation Engineer · Independent Practice — Jan 2025 – Present

Small-business systems and applied-AI research · Lakeville, MA

- Run monolithconcorp.com and the back office behind it for a commercial contractor, rebuilt with Claude Code through the company's shift to commercial work, plus an AI-assisted weekly payroll workflow.
- Run a paper-trading research lab that tests LLM judgment against no-AI twins on a holdout period, with eight strategies forward-testing on a daily scheduled job.

Web Developer · Monolith Construction Corp. — Jan 2024 – Jan 2025

Commercial concrete & masonry contractor, Greater Boston · Lakeville, MA · Hybrid

- Designed, built and deployed the company website on AWS, and set up Google Workspace as the company's collaboration platform.

AI Trainer (Contract) · DataAnnotation — Jun 2024 – Jan 2025

Remote

- Evaluated and debugged frontier-LLM answers to coding prompts and wrote reference prompts and solutions in Python, TypeScript, SQL and C# used to train models.

Teaching Assistant · Embry-Riddle Aeronautical University — Jan 2022 – May 2022

Daytona Beach, FL

SKILLS

How I work: Claude Code: multi-agent orchestration, subagents, skills, hooks · Claude API & Agent SDK · MCP tool integrations · Evals against no-AI baselines · Context engineering (CLAUDE.md, handoffs, design records)

Where it runs: Oracle & PL/SQL · AWS (Lambda, SQS, API Gateway, S3, DynamoDB) · Liquibase · Salesforce · Warehouse robotics · GitHub Actions · Datadog

Languages: TypeScript · Python · SQL

EDUCATION & CERTIFICATIONS

B.S. Computer Science, University of Massachusetts Amherst — Jan 2024

GPA 3.73 · Dean's List · Coursework: AI, Algorithms, Data Management, Secure Distributed Systems, Web Programming

AWS Certified Cloud Practitioner — Apr 2024
